## DETAILED ACTION

### *Information Disclosure Statement*

The information disclosure statement (IDS) submitted on 3/18/2009 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement has been considered by the examiner.

### *Allowable Subject Matter*

Claims 85-86, 88-90, 93, 115-116 and 132-134 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding independent claim 85, the prior art of record fails to anticipate or rendered obvious the combined elements/steps of "**coupled to said network a plurality of media devices comprising a plurality of different types of media objects comprising media, said plurality of media devices comprising a video device comprising video objects, an audio device comprising audio objects, and an image device comprising image objects**" in conjunction with "**organizing the plurality of different types of media objects based on the type of media object**" in further conjunction with the acquisition and control/playback and the first and second requests between the two set-top box devices, as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

In regards to the prior art references previously used to reject the claims, Elliot only teaches a acquisition storage set-top box and a control/playback set-top box that only stores and accesses video objects using a video application. Elliot fails to teach that the acquisition storage set-top box has the capability of storing audio and image files, nor the applications to listen/view audio and image files. Elliot further fails to teach requesting objects other than video objects and that the acquisition storage set-top box is connected to a plurality of media devices (**Elliot only teaches receiving television signals from a television channel**).

Zeidler teaches that a set-top box can store various types of objects (**video, audio and photographs**), but fails to teach allowing a control/playback set-top box to access such files by making a first and second request. Zeidler also fails to teach different applications to view/listen to video, audio and image objects. Zeidler also fails to teach that an acquisition storage set top box receives audio, video and image objects from a plurality of media devices over a network.

Chan teaches a component capable of receiving video and audio from multiple media devices, but fails to teach receiving image data from a media device and an acquisition storage set top box and control/playback set top box devices used to request different types of objects through a first and second request, as recited in the claims.

The Examiner has further searched and found the Needham and Grooters references. Needham discloses a peer-to-peer system including a storage set top box

that stores audio, video and image objects and a playback set top box for requesting these objects from the storage set top box. However, Needham fails to disclose receiving different media objects from different media devices, different applications to play the audio, video and image objects, a receiving a second request for a second media object (**in conjunction with the first request**) and a plurality of client devices as recited in the claims. Grooters discloses an information appliance connected to a plurality of media devices for receiving various types of objects and organizing the objects based on the type of object, but fails to teach an acquisition storage set top box and control/playback set top box, different applications to play the audio, video and image objects, a receiving a second request for a second media object (**in conjunction with the first request**) and a plurality of client devices as recited in the claims.
